# Helping Folks "Catch the Buzz"

What makes it a bee?

If you can count to six, you can describe what makes a bee special in the insect world. \*

#### One Bee

#### **Two Antennae**

Three Body Parts
Head, thorax and abdomen

## **Four Wings**

### **Five Eyes**

Three small simple eyes (ocelli) which detect only shadow and light.

Two large compound eyes with many lenses make detailed images.

Six Legs
Like all insects!

\*Credit: Dr. Rebecca Tonietto, Michigan State University, for the teaching concept.
